

# The Guardian Edge

– THE LOWER COST FRT SOLUTION FOR YOUR VENUE

A fully integrated, market-leading, low cost facial recognition system that identifies barred persons as they enter a gaming room, by matching them using onsite edge computing technology against images of barred persons sourced from BOEN.

**The Guardian Edge version is not just a FRT system, it's a full compliance solution for your gaming operation.**

Approved by CBS.

## KEY BENEFITS

- **Reduced workload for your staff:**
  - » BOEN Images are displayed on The Guardian QEC Tablet installed in the Cashiers Area. This enables your staff to view the barred person information stored in Concern/BOEN to assist in the identification of a person who is barred from your gaming area directly from your cashiers area using their unique secure PIN.
  - » When a Barred Person is detected, the image of the person entering your gaming area is shown on the The Guardian QEC Tablet alongside the source image from BOEN. No need for your staff to sign into BOEN to confirm the Barred Person's source image.
  - » The Guardian Automatically completes the 'Breach of Barring Form' when a detection is made. Your venue staff simply confirm the detection on The Guardian QEC Tablet, select the appropriate tick boxes on screen and enter any relevant comments. A secure link to download the completed report is emailed to venue management.
- **Highly reliable solution**, utilising edge computing technology onsite and an independently tested top ranking FR algorithm, to ensure accuracy and minimises false positives.
- **Industrial grade solution** – designed specifically for Gaming Room environments.
- **Utilises Panasonic Dome Cameras** with pole & wall mounting options. Range – up to 5m.
- **Easy to use**, full onsite training provided, backed by a 7 days per week telephone support team (business hour support included).
- **Technical support** provided by Amtek, or your preferred service company.
